

AI & DATA SCIENCE · KAUNAS, EU

AI that cuts cost and grows revenue, *proven at every step.*

Two outcomes, no third: a system cuts cost, or it generates revenue. We put a number on it before launch and after. If we cannot measure it, we say so and scope it down.

Everything we ship arrives with its proof.

Most teams start at Stage 0. Almost everyone stalls at Stage 3: until your AI is independently proven, everything above stays locked.

FIVE RUNGS. ENTER AT ANY ONE.

Each is bought on its own. Most clients need one or two, not all five.

1	ORIENT Point your AI effort at the right problems, fast. Maturity-stage diagnosis · focused senior sessions · a prioritized opportunity shortlist · a direction memo.	Consultation €250 Direction session €750
2	ENABLE Get your team fluent, safe, and governed. Training on your team's real tasks · a cheat-sheet per person · usage guidelines · an internal AI policy you own.	Training from €1,500 Usage policy from €3,000
3	PROVE ← Make your AI provable, independently. AI Act exposure map · AI Register · scored risk-versus-value matrix · a decision per use case · action plan.	ROI and readiness from €1,500 Compliance from €4,500
4	BUILD Ship assured AI applications you own. Scaffolding · PoC · Implementation, each shipping an MCP endpoint, an eval harness, drift monitoring and Annex IV documentation.	Scaffolding from €1,290 · PoC from €3,900 Implementation from €12,000 + €900/mo
5	OPERATE Autonomous agents inside an assurance envelope. AimRank OS: decision- and trajectory-level evaluation · behavioral drift · tamper-evident action logs · a kill switch.	Custom, scoped on a call

All figures are starting anchors. The number we agree before starting is the number you pay.

THE FOUR GUARANTEES™

Every build clears this bar, or we scope it down and tell you why.

01 Measured value It cuts cost or grows revenue, and we prove the number: before launch and after.	02 Defensible Every decision survives a client, a board or a regulator, with the paperwork already in hand.	03 Self-correcting It never fails silently. Wherever a feedback signal exists, it improves the longer it runs.	04 Yours & everywhere Any cloud or on-prem. An MCP endpoint your agents can call. No lock-in.
--	---	--	---

PROOF, NOT DESCRIPTION

Two separate projects, each with its own numbers.

DOCUMENT INTELLIGENCE £900,000 SAVED PER YEAR 90% faster than manual review · 100,000 documents a month. A multi-billion-dollar enterprise.	BEHAVIOR MODEL 20M USERS Raw usage turned into revenue forecasts a finance team can plan against.
--	--

Client-reported figures from delivered engagements, as of September 2026.

We are not a fit if you want a demo, a chatbot with no measurable outcome, or advice with nobody building anything afterwards.
